

NULOGY'S AGILE CUSTOMIZATION PLATFORM

Operational Solution

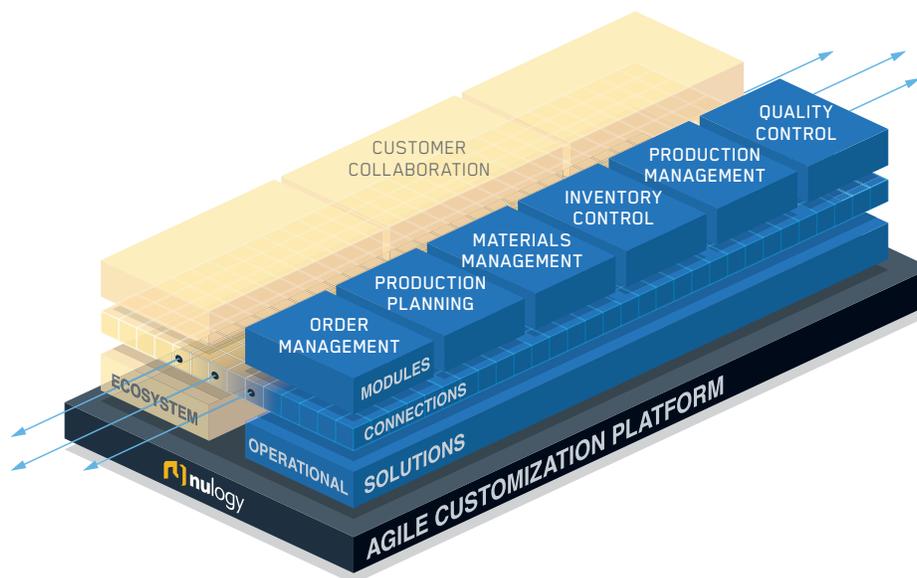

Unleash agility in late-stage customization

As brands increasingly move to an asset-lean model and rely more heavily on external suppliers for production, contract packagers and manufacturers have seen tremendous opportunity for growth.

Coupled with this opportunity, is the prevailing challenge of managing the complexity of short-order runs, reduced lead times, rising labor costs, and increased regulatory requirements.

Nulogy's Operational Solution helps external suppliers of manufacturing and packaging services run more efficient, profitable operations while improving quality and service levels.

Benefits of Nulogy's Operational Solution

REDUCE COSTS

Real-time production metrics and the seamless flow of end-to-end data help you maximize labor productivity, identify and troubleshoot shop floor issues, and save hundreds of hours on administrative, data collection, and reporting activities. Connected production and inventory capabilities help you reduce on-hand materials storage without risking production shortages.

INCREASE REVENUE

Grow your business by better utilizing resources and delivering superior customer service. Nulogy's Operational Solution helps you improve efficiency, allowing you to achieve customer "on-time, in-full" targets, while delivering more with the same resources. Automated data capture lets you streamline customer data sharing and create more consistent and competitive quotes.

IMPROVE QUALITY AND TRACEABILITY

Build trust with your customers by ensuring the quality control of their products, the accuracy of data that flows from your business to theirs, and the full traceability of their materials as they move through your warehouse and shop floor processes.

ORDER MANAGEMENT MODULE

- Leverage historical production costs and standard assembly steps to provide quick, profitable estimates and competitive pricing to customers
- Compare historical performance against expected performance to identify underperforming models and optimize your service offerings around high-performing models
- Produce customer invoices directly from production or shipments

PRODUCTION PLANNING MODULE

- Auto-generate production schedules and quickly iterate to optimize for the most efficient use of resources
- Effortlessly plan production by accessing up-to-date information on bill of materials, pricing, and production steps in one centralized location

MATERIALS MANAGEMENT MODULE

- Gain visibility into material shortages against planned production, accounting for shared components
- Quickly assess capabilities to handle last-minute customer requests by seeing inventory on-hand and on-order
- Create orders based on materials needed to fulfill customer production requirements

INVENTORY CONTROL MODULE

- Leverage full lot and expiry traceability from subcomponent receipt to finished good shipment, enabling quick recalls
- Enforce tight process controls through warehouse and production processes, helping to reduce shrinkage and eliminate data entry errors

PRODUCTION MANAGEMENT MODULE

- Track real-time labor, downtime, and units produced for production performance visibility
- Leverage historical production performance reporting to identify high versus underperforming lines and make continuous improvements

QUALITY CONTROL MODULE

- Digitize quality checks for better process control, management, and reporting
- Enable compliance with electronic signatures and audit trails
- Generate electronic batch records that document critical production information

ABOUT NULOGY

Nulogy's cloud-based Agile Customization Platform allows consumer brands and their external suppliers to respond with ease and speed to a volatile retail and consumer environment. Designed to optimize product customization, the platform allows consumer brands to manage their external supply chain with unprecedented visibility and clarity, while providing contract packagers, contract manufacturers, and value-added logistics providers with an end-to-end solution to run more efficient, reliable, and profitable operations.

Now, on one unifying platform, the supply chain ecosystem can connect and deliver customized products with ease, speed, and quality, while minimizing waste and reducing costs.

Find out how you can manage your late-stage customization workflows with agility.
