Olive Oil in PET vs Glass Bottles

EE$ of Packaging$ Research Series

Olive Oil in PET vs Glass Bottles is the second published study within our EE$ of Packaging$ research series. These studies emphasize the Economic impact and the Environmental impact of specific products, packages, and processes.

In this study, we examine the alternatives for packaging olive oil in a PET bottle or a glass bottle. We include a complete value chain and life cycle analysis in the research.

Undoubtedly, you have read or heard diametrically opposed economic and environmental claims about packaging from sources with equally good reputations. This common occurrence leaves industry participants, prospects, and customers frustrated and uncertain as to which results should be believed. We solve this dilemma in the EE$ of Packaging$ research series.

Our SavvyPack® Index is at the heart of this solution. Our SavvyPack® Index complements our SavvyPack® Analysis Service. Primarily, we analyze the economic and environmental impacts of packaging through our Analytical Service and compare the results utilizing our SavvyPack® Index. We also include package performance results in the index.

With this new study you can:
> Understand the points of view of competing industries
> Learn, quantitatively, how competing claims are constructed by their proponents
> Break free from the stalemate caused by competing claims
> Discover a powerful and independent service and methodology designed specifically for package industry issues
Olive Oil in PET vs Glass Bottles

EE's Packaging Research Series

Learn About:
> Olive Oil packaged in a glass bottle and a PET bottle
> In-depth economic analysis for both
> In-depth environmental analysis for both
> The latest technology developments and the impact they have

Written For Decision Makers:
> Converters
> Raw Material Suppliers
> Equipment and Machinery Suppliers
> Brand Owners
> Industry Analysts

What is included:
> A value chain analysis of packaged Olive Oil
> A corresponding life cycle analysis
> A what-if evaluating the oxygen fuel furnace for glass bottle production
> 12 metrics in the SavvyPack® Index

Section I:
A. Introduction
B. Key definitions
1. Point of view
2. SavvyPack Analysis Service
3. SavvyPack Index
C. Study organization
D. Geographic considerations
E. Study methodology
F. Conventions

Section II:
ECONOMICS
A. Key assumptions
B. Case 1a: Glass bottle
1. Bottle size
2. Product waste
3. Scope of the analysis
4. End-of-life
B. Case 1b: Glass bottle – Filling cost
1. Manufacturing cost
2. Manufacturing cost results
C. Case 2a: PET bottle
1. General assumptions
2. Manufacturing cost results
D. Case 2b: PET bottle – Filling cost
1. General assumptions
2. Filling cost results
E. Case 3: Glass bottle life cycle analysis (LCA)
1. Energy consumption
2. Greenhouse gas releases
3. Water consumption
4. End-of-life
F. Conclusions

Section III:
A. Key assumptions
B. Case 3: Glass bottle life cycle analysis (LCA)
1. Energy consumption
2. Greenhouse gas releases
3. Water consumption
4. End-of-life
B. Case 4: PET bottle life cycle analysis (LCA)
1. Energy consumption
2. Greenhouse gas releases
3. Water consumption
4. End-of-life

Section IV:
A. SavvyPack Index defined
B. Metric results
1. Package manufacturing cost
2. Package filling cost
3. Greenhouse gas (GHG) releases
4. Energy consumption
5. Water consumption
6. Material to landfill
7. Package efficiency
8. Pallet efficiency
9. Post-user recycling rate
10. Raw material recycled content
11. Product protection
12. Product perception

Section V:
A. What-ifs
B. Bottle self-manufacturing
1. Concept
2. Model adjustments
3. Results

Additional Allied Development Capabilities

Allied Development's SavvyPack® Packaging Analysis Service is the industry standard for economic and environmental analysis of packaging.

Stick Pouches
an in-depth global study of the global stick pouch industry.

U.S. Foodservice Packaging
a detailed analysis of the U.S. foodservice market.

Barrier Materials for Rigid Packaging
a comprehensive global analysis of barrier materials used in the production of rigid packaging.

U.S. Microwavable Packaging
an in-depth study of the U.S. microwavable packaging industry.

Medical Device Packaging
a global study of disposable medical device packaging including volume and value of primary, secondary, insert, and tertiary packaging.

Pharmaceutical Packaging
a global study of the pharmaceutical packaging market.

Stand-up Pouches
an in-depth study of stand-up pouches including volumes, values, trends, emerging competitive products, technologies, and economics.

PET Bottles
a global analysis of the PET Bottle industry

Barrier Materials for Flexible Packaging
a comprehensive global analysis of barrier materials used in the production of flexible packaging.

Oriented Films for Packaging
a global study of the oriented films industry.

Transparent Oxide-coated Films
a global study of the transparent oxide-coated films industry focused on packaging.

Retort Pouches
an in-depth global study of the retort pouch industry.

Labels in Packaging
a global study of the label industry.

Packaging in India
a detailed study of the packaging industry in India.

Pharmaceutical Blister Packaging
a global study of the pharmaceutical blister packaging market.

Biopolymers in Packaging
an in-depth global study of the biopolymer industry, focusing on packaging.

Table of Contents:

Section I:
Introduction
A. What is the purpose of this study?
B. Key definitions
1. Point of view
2. SavvyPack Analysis Service
3. SavvyPack Index
C. Study organization
D. Geographic considerations
E. Study methodology
F. Conventions

Section II:
ECONOMICS
A. Key assumptions
B. Case 1a: Glass bottle
1. Bottle size
2. Product waste
3. Scope of the analysis
4. End-of-life
B. Case 1b: Glass bottle – Filling cost
1. Manufacturing cost
2. Manufacturing cost results
C. Case 2a: PET bottle
1. General assumptions
2. Manufacturing cost results
D. Case 2b: PET bottle – Filling cost
1. General assumptions
2. Filling cost results
E. Case 3: Glass bottle life cycle analysis (LCA)
1. Energy consumption
2. Greenhouse gas releases
3. Water consumption
4. End-of-life
F. Conclusions

Section III:
A. Key assumptions
B. Case 3: Glass bottle life cycle analysis (LCA)
1. Energy consumption
2. Greenhouse gas releases
3. Water consumption
4. End-of-life
B. Case 4: PET bottle life cycle analysis (LCA)
1. Energy consumption
2. Greenhouse gas releases
3. Water consumption
4. End-of-life

Section IV:
A. SavvyPack Index defined
B. Metric results
1. Package manufacturing cost
2. Package filling cost
3. Greenhouse gas (GHG) releases
4. Energy consumption
5. Water consumption
6. Material to landfill
7. Package efficiency
8. Pallet efficiency
9. Post-user recycling rate
10. Raw material recycled content
11. Product protection
12. Product perception

Section V:
A. What-ifs
B. Bottle self-manufacturing
1. Concept
2. Model adjustments
3. Results

- **Single User License** is for one person and does not allow any copying, emailing, or re-distribution.
- **Corporate License** allows copying, emailing, and re-distribution within the purchasing company and its 100% owned subsidiaries.

### Payment Information

#### Olive Oil in PET vs Glass Bottle

- @US$1,995 - Full Study - Corporate License - PDF Format and Web Browser access
- @US$1,495 - Full Study - Single User License - PDF Format and Web Browser access
- @US$500 - Additional Copies - PDF Format
- Shipping & Handling Per Printed Copy (US$25 in the U.S., US$50 elsewhere)
- Add $250.00 for each study printed

**TOTAL:** $ __________

### Payment Method

Payment Endorsed  
(Payable to Packaging Strategies in U.S. funds on a U.S. Bank)

Charge my Credit Card:  
- **VISA**  
- **MasterCard**  
- **American Express**

**Card number:**  
**Expiration Date:**  
**Security Code:**  
**Billing Address of Card:**  
**Signature:**
